Edgings

For simple luncheon sets, chair sets, bedroom sets, made of linen, an effective touch is added by using an edging, either simple or elaborate, and made of crochet cotton in either No. 50, 30, or 10, depending on the weight of the linen used. A medallion inserted in each of the corners makes a set unusual and one is amply repaid for the extra work.

DIRECTIONS FOR THE REVERSE STITCH

Begin ring, making three double stitches, picot, two double stitches, picot, three double stitches (figure one) (this is one-half of ring), take work off from hand* (reverse), turn over (figure two), put work on hand so that the thread which was under is now over the hand. Take shuttle No. 2 and make the other half of the ring, with the reverse stitch, which is done by holding the thread on the hand taut, and making the stitch with the thread from the shuttle, making three double stitches, picot, two double stitches, picot, three double stitches (figure three), take work from hand, turn over*, take shuttle No. 1 and close ring (figure four).

In joining while doing reverse work, do not draw shuttle very taut after passing through joining loop, but draw the loop back again so that the joining stitch is made with the thread from shuttle and the thread on the hand may be drawn back and forth.

AN OLD ART REVIVED

Let's all start tatting together! When one sees the effective new designs shown here and the lovely thread on the market, the discriminating needleworker will be intrigued by the possibilities of the combination, which are endless, and will not rest until the work takes form under her hands and is completed.

There will be found lovely colors as well as white in both crochet and tatting cotton and there also comes another type that is called "shaded," the colors being pink, blue, yellow, lavender, green, and black and white, in toning of the same color, which makes ideal trimmings for dainty handkerchiefs. There is also made a range of tinted colors in this tatting cotton—that is, combinations of different colors with white that are well balanced both in hue and tone. One will love the articles that are made with them.

However, after seeing the specialized materials available today, one will wonder how needleworkers of olden times made such beautiful lasting articles from the threads then obtainable. The thread used was coarser, rougher, and with no regularity of spinning, for tatting is an old lace-making art and has come down to us from the Middle Ages, when it apparently developed in several parts of the world.

The Italians gave it a name meaning "eye," because of the similarity of the rings to the eyes; the French gave it a name to describe its delicate appearance; the Orientals call it by a word meaning "the shuttle," which is used in making; and in America, it is called "tatting," probably from the word "tatters," as it is made in sections which are then connected.

Designs in the early days, before the printing press was invented, were handed from neighbor to neighbor and copied in this way; but today, the large modern illustrations and clear directions make the work very easy. It is suggested that the directions, abbreviations, and notes be carefully read before starting work.

There is included in this book the most useful up-to-date articles for this work, from tiny edgings of the finest thread for handkerchiefs, dainty baby caps, a lacy yoke for silk underwear, to medallions and edgings with which to decorate linens; also doilies of several sizes, and a chair set for medium-size threads. Many of these lovely articles may be made of different size thread, depending on the space in which they are to be used. As coarse a thread as size No. 10 is practical if desired.

There is really no limit to the possibilities of tatting, for this needle-art is composed of knots and stitches, made lacy with loops of picots, for the different arrangements produce many and varied patterns, as shown in the preceding pages.

Tatting is a form of lace made with a tatting shuttle, and for some designs only one shuttle is needed, while for others two are required. In the latter case, it is more convenient to have a second shuttle.

Instructions for Tatting

As will be judged, the simplest form of tatting is the ring which is made with one shuttle, and when a chain is introduced, the second shuttle is required. In learning to tat, the knot is made on the shuttle thread, and not with it though all the action is taken with the shuttle thread, shown in illustration No. 3. A second important fact to remember is that the shuttle thread is pulled taut before the knot is tightened.

First, wind the thread around the bobbin in the shuttle, layer over layer, but the thread should never extend over the edge.

To make a ring: Hold the shuttle between the thumb and forefinger of the right hand as shown. Hold the end of the thread between the thumb and forefinger of the left hand and pass it around the fingers of this hand, not too tightly, crossing it under the thumb. It is with this loop of thread that the ring is worked and this is called the ring thread. Throw the shuttle thread over the right hand as in illustration No. 1. Pass the shuttle between the first and second fingers of left hand under the shuttle and ring threads and back over ring thread, allowing the ring thread to fall slack by bringing the four fingers of the left hand together. Pull shuttle thread taut, then open the fingers of the left hand until the loop is caught with the thumb, as shown in No. 3.

For the second half, the thread is dropped instead of raised, shuttle is passed over the left-hand thread instead of under (as before), is brought through below, between the two threads (as before) and drawn up in the same way. (Illustration No. 2.) Illustration No. 4 shows the second half of stitch slipping into place beside the first half.

This group is called a double stitch and is the main stitch used in tatting. In making this, it will be found that by pulling the shuttle thread and then the ring thread, the stitch slips back and forth on the shuttle thread. If it does not, the stitch has been locked and must be made over again.

Illustration No. 5 shows a picot which is made by leaving a space of thread between the stitches, and to join two picots, draw the working thread through the picot and pass shuttle through loop. Then draw up close to resemble a half stitch, but not to be counted as one.

Two shuttles are required to make a design having a chain. Tie the threads together and hold between the thumb and second finger of the left hand and with the first finger outstretched, wind the thread around it two or three times, allowing the second shuttle to drop as on No. 6. The stitches for the chain are made with the thread between the first and second fingers in the same way as those for the rings.

NOTES

All beginners should use coarse thread to see work better.

Never break off thread after winding shuttle if directions call for chain (ch). When a shuttle has a point or hook, be careful to keep point forward. Rings are to be made close together unless directions call for space (sp). A ring is always to be drawn close unless otherwise stated. Space

means to allow thread between last ring and new one. When making medallions, doilies, or centerpieces, the work will be lovelier and easier to do if it is pressed every two or three rows, in the desired form, and to do this place on a thick pad, shape, and press over a damp cloth, and then a dry one, until the piece is dry. This will show how the work is going, and will keep it from being too full or too tight.
